

# Teletrack Pre-Starts

Take safety to the next level on your construction projects.

The Teletrack Pre-start safety solution for construction equipment is a revolutionary new way to ensure operators only use what they are licensed and allowed to use. All equipment on a Teletrack mandated jobsite is immobilised requiring a login and digital safety check on a smartphone before use.

The cloud-based platform is a gateway for safety managers to view usage logs, upload pre-start questionnaires and control access based on qualifications and management preferences. This system is particularly helpful for rental companies ensuring operators are the hiring contractor.

## Teletrack fitted machines are equipped with:

- ✓ a QR code so operators can scan their smartphone to sign in,
- ✓ an iButton reader for backup access if the internet goes down and;
- ✓ the cloud-connected safety device.

The QR code also functions as a link for operators to get inducted into the system where they can request approval for access after submitting licensing and contact information.

# System Operation

- 1 Each asset is fitted with the Teletrack Pre-start kit which consists of a QR code, iButton reader and a set of iButtons (an iButton is a coin-sized identification device that has a unique ID).
- 2 Operators get inducted into Teletrack by scanning a QR code and completing the digital registration form.

- 3 The supervising manager or designated health and safety manager verifies their qualifications and approves access.
- 4 Operator receives an SMS and email with their login credentials.
- 5 When an operator wants to use an asset they scan the QR code with their smartphone, then complete the safety questionnaire and begin operating.

## Why Teletrack?

- ✓ The safety system has been designed and developed in Australia using dedicated, directly employed engineering professionals.
- ✓ Our fully managed service offering for construction projects gives site managers and supporting rental companies piece of mind.
- ✓ Perfect for companies that require enforced compliance for asset usage and operator accountability.
- ✓ Designed for innovative work environments wanting to harness the latest technology.

## Why Use Teletrack Pre-Starts?

-  Gain greater control over who has access to assets with one Teletrack login per operator.
-  Operators complete a smartphone image-based questionnaire to confirm the asset is safe to use and can report damage by taking photos.
-  Enforced automatic smartphone-based inductions and asset operation competency check/questionnaire.
-  No need to hand out access codes. Operators receive email and SMS with login details.

If you represent a construction company speak to us about our fully managed service for your current or future projects. Have confidence that switching enhanced safety on isn't going to become a management burden for site management and contractors.

### PRE-START

MACHINE IS IMMOBILISED

Authorised operator to scan with smartphone camera and go through checklist to activate machine.
